Certified Network Defender (CND)

This course is a skills-based, lab intensive comprehensive network security certification training program based on the security education framework and work role task analysis presented by the National Infocomm Competency Framework (NICF) as well as a job-task analysis and cybersecurity education framework by the National Initiative of Cybersecurity Education (NICE). The course has also been mapped to global job roles and to the Department of Defense (DoD) job roles for system/network administrators. The program prepares network administrators how to identify what parts of an organization need to be reviewed and tested for security vulnerabilities and how to reduce, prevent, and mitigate risks in the network. CND covers the protect, detect, respond, and predict approach to network security.

Certified Ethical Hacker

This course provides an in-depth understanding of ethical hacking phases, various attack vectors, and preventative countermeasures. Learn how hackers think and act to be better positioned to set up your security infrastructure and defend against attacks. By providing an understanding of system vulnerabilities, the course teaches how to protect organizations and strengthen security controls in order to minimize the risk of a malicious attack. Built to incorporate a hands-on environment and systematic process across each ethical hacking domain and methodology, students have the opportunity to work toward proving the required knowledge and skills needed to achieve the CEH credential and perform the job of an ethical hacker.

Certified Cybersecurity Technician

This course will teach students to validate hands-technician-level IT and cybersecurity skills. It is based on an entry-level cybersecurity program engineered by the creators of the Certified Ethical Hacker program to address the global demand for cybersecurity technicians. Students will learn core security skills to pursue and develop their cybersecurity careers as cybersecurity specialists, consultants, network engineers, or IT administrators.
